Quarterly Update and Future Positions	3

**Quarter 1 and 2:**

It is with great pleasure that I am able to bring to the attention of the Telex User Base, our recent progress with regards to product development on the TelexAI project. While things on the surface may appear to be completely at a standstill, the team has made significant strides in terms of seeing the completion of the software project suite. This includes the newly developed ability to access TelexAI, whether it is for the trading aspect, or for the newly defined feature, investment into securities based projects. To that end, we are and have been fully utilizing our status of approval in Estonia, as well as the ever elusive CryptoCurrency Exchange Operation Licence to really push the boundary for the accessibility element in crypto, which means you will be able to access TelexAI through an upcoming partner platform, whose user base currently sits at over: 2 billion Monthly Users. This new partner platform is secondary to the current platform Telegram. Now, enough with the vague updates and past, the market is alive, and it's time for TelexAI to come alive.

So, What Now?:

Moving forward it is our intention to take a new home under the wing of the TurtleNetwork platform to facilitate our upcoming IEO crowdsale, using the smart contract infrastructure available to us through TurtleNetwork, we are able to securely ensure the backend tokens for our crowdsale and upcoming crowdsales may ONLY be traded by KYC Whitelisted addresses, natively on the TurtleDex alongside all the other assets, without having to visit any other site. In fact, the framework that is being developed at the moment will allow users to interact with the TurtleNetwork platform and other networks directly from TelexAI (Telegram and Upcoming Partner Platform). All of this has been possible to this point, thanks to our beloved investors and the country of Estonia.

Uhm, Hold the Phone..:

Sure, we have time, no worries... Yes TelexAI is going to have an IEO, and the details pertaining to that will be released in the near future, with regard to the partner platform announcement, TelexAI will be returning to a LIVE testnet state, where we will once again run a contest, reward the winners and testers, and gather feedback as we continue to develop towards our crowdsale and upcoming future of the products life cycle. As a final piece, I would like to inform everyone that TelexAI intends to build a gateway developed for TurtleNetwork platform as soon as possible, and in the meantime, as in the past, we will provide a manual transfer structure through which once can move their supply from Ethereum over to TurtleNetwork.

Sincerely,

Co-Founder Nathan Sharp
